FREE GUIDE

Operations self-assessment

15 questions to find out in 10 minutes where your company is losing money, and a worksheet to work out how much.

10 minutes | For management and operations | No confidential data

BEFORE YOU START

How to use this guide

Most companies do not lose money through one big mistake. They lose it through dozens of small frictions that repeat every day and never show up in any report: data typed in twice, paperwork that takes ages to arrive, decisions made too late, indispensable people without whom everything stops.

This self-assessment helps you put a name to them in 10 minutes.

1

Answer with today in mind

How your operation really works, not how it should work or how it worked two years ago.

2

Score each statement

0 if it does not happen or is very rare, 1 if it happens sometimes, 2 if it happens often.

3

Add up and read your result

At the end you will find what your score means and the area to start with.

4

Put a price on it

With the worksheet on page 6 you turn the clearest loss into euros per year.

Tip: do it with the person who runs the operation day to day. What management sees and what the people on the loading dock, in the warehouse or in the office see do not always match, and that difference is already a finding.

THE QUESTIONS · 1 OF 2

Does this sound like your company?

0 = does not happen or very rare · 1 = sometimes · 2 = often

Workflow

Subtotal: ____ / 6

1	Orders, lorries, pallets or files sit idle waiting for someone to do something.	☐ 0 ☐ 1 ☐ 2
2	The same data is typed in more than once: on the order, in a spreadsheet, on the delivery note, on the invoice.	☐ 0 ☐ 1 ☐ 2
3	Some tasks are done «because it has always been done that way» and nobody can explain what they are for.	☐ 0 ☐ 1 ☐ 2

Data and decisions

Subtotal: ____ / 6

4	Key figures (profitability per customer, costs, shrinkage) arrive at the end of the month or quarter.	☐ 0 ☐ 1 ☐ 2
5	Important decisions are made by gut feeling or experience, without any data to hand.	☐ 0 ☐ 1 ☐ 2
6	Two people in the company give different figures for the same question.	☐ 0 ☐ 1 ☐ 2

People and dependencies

Subtotal: ____ / 6

7	There is someone without whom part of the operation grinds to a halt.	☐ 0 ☐ 1 ☐ 2
8	There is a critical spreadsheet that only one person understands.	☐ 0 ☐ 1 ☐ 2
9	The team spends time every week looking for information, paperwork or goods.	☐ 0 ☐ 1 ☐ 2

THE QUESTIONS · 2 OF 2

Keep scoring

0 = does not happen or very rare · 1 = sometimes · 2 = often

Systems

Subtotal: ____ / 6

10	The software you use (orders, warehouse, invoicing) does not talk to each other, and someone bridges the gap by hand.	☐ 0 ☐ 1 ☐ 2
11	A tool was bought that is now barely used or used badly.	☐ 0 ☐ 1 ☐ 2
12	To find out how something is going, you have to ask someone instead of checking a system.	☐ 0 ☐ 1 ☐ 2

Customers and payment

Subtotal: ____ / 6

13	More than three days pass between delivering the service or product and issuing the invoice.	☐ 0 ☐ 1 ☐ 2
14	Charges that should be invoiced slip through: waiting time, extras, incidents, additional freight.	☐ 0 ☐ 1 ☐ 2
15	You find out about problems when the customer calls, not before.	☐ 0 ☐ 1 ☐ 2

Total score **____ / 30**

The three 2-point frictions that hurt you most

1.

2.

3.

YOUR RESULT

What your score means

0 – 8

Healthy operation

Your company runs in an orderly way. There will be specific improvements: start with the one that repeats most often each day, because it gives the biggest return with the least risk.

9 – 18

Silent losses

This is the most common result. Several of these frictions are probably costing you thousands of euros a year without showing up in any report, and almost all of them can be solved without changing software.

19 – 30

Growth is getting expensive

Your operation relies too much on specific people, spreadsheets and paper. Every new customer adds more effort than margin. Sorting this out is usually what frees up the most profitability.

Where do I start?

Look at which area has the highest subtotal. That is your first project. And before talking about technology, put a price on it with the worksheet on the next page: when a friction has a figure in euros next to it, the decision makes itself.

> **Note:** a low score in an area does not mean there is no room for improvement. It means that is not where your urgency lies.

PUT A PRICE ON IT

What a process costs you each year

Pick a repetitive task from those that scored 2 points and do this calculation:

minutes each time × times per day × people × working days × hourly cost ÷ 60

Real calculation example

Entering signed delivery notes into the system so they can be invoiced: 4 minutes each, 60 a day per person, 2 people, 220 days a year and €25 an hour.

4 × 60 × 2 × 220 × 25 ÷ 60 = €44,000 a year

Forty-four thousand euros spent typing what is already written on a piece of paper.

Task	Min.	Times/day	People	Days	€/hour	€ per year

If you do not know the exact hourly cost, take the gross annual salary plus 30% for employer costs, divided by 1,750 hours.

THE NEXT STEP

Now, with your numbers

This self-assessment tells you where to look. The Advantys Operations Diagnostic tells you exactly how much you are losing and what to do first.

- ✓ We go into your real operation and talk to the people who plan, load, pick and invoice.
- ✓ We measure the losses with your own data, in time and in euros.
- ✓ We give you an improvement plan ranked by return, with the investment and timeframe for each one.
- ✓ Fixed price. The plan is yours. If we then carry out the project together, the diagnostic is deducted.

Is your company in transport, logistics or agri-food? We have specific solutions: **Advantys AI Transporte y Logística** and **Advantys AI Trazabilidad Agroalimentaria**.

Book a 30-minute call

No commitment. We will tell you whether it makes sense to go further.
